The Ugliest Man

Library Is Of Interest

The Butte Chamber of Commerce is asking the residents of Butte and Tech alumni to contribute $20,000 to expand the library in English and History. The money will be used to purchase source and reference materials which have not been provided for in the normal library budget and hopefully assure Tech's receiving permission from the Board of Regents to grant degrees in English and History.

According to Mr. Charles Carveth, chairman of the Montana Tech Committee of the Chamber of Commerce, many people have helped implement the drive for library funds. The Butte Chapter of the National Secretaries Association and the students of the Butte Business College put considerable time and effort into the mailings. On campus, the student library assistant, Mrs. Donna Clark, several members of the Spurettes, and Henry McClaran, staffed and mailed the last 1500 brochures.

According to Mr. Howell whose office is handling the return—the initial response of the public is gratifying.

The music room in the library is equipped with turntable, amplifier, and head phones. The headphones give excellent sound separation and reproduction. For those who don't care for headphones, the sound booth in the museum is now open for student use. It is equipped with turntable, amplifier and speaker. Mrs. Peck said that she would like to thank Dr. Doman for assembling and testing the new components.

To gain use of the music facilities, just check at the main desk in the library. At present the music room can handle only one person at a time, but the sound booth can accommodate 3 to 5 persons comfortably.

The music is catalogued into different areas:

- Records: A catalog of records is available in the library. The records can be checked out of the library for 3 days, providing the library has good equipment with a fairly new dictaphone. To check out a stylus for nickers or other signs of wear, see Prof. Smith in the metalurgy department. He will put it under a microscope for examination.
F M Committee Makes Progress

At the meeting of the F. M. Radio Feasability Study Committee December 2, tentative plans were made for a field trip to Bozeman in order to study the F. M. station on the campus there.

The station in Bozeman is completely financed by the students. There are 78 people on the station’s staff, of which only four are paid. The station manager receives $150 a term; the engineer and the two program directors all receive $100 a term.

The format at Bozeman consists mainly of music.

The date for the field trip has been tentatively set for December 12.

The committee has begun soliciting donations from the downtown businessmen. At the present time, the Anaconda Company has promised the committee $500.

Other companies the committee plans to contact are: The Montana Power Company, the Telephone Company; the Chamber of Commerce, the Century Club, Booster Club, Kiwanis and small businessmen of Butte.

The committee is also studying the feasibility of student financing for the station. A fee increase of $2.50 to $5.00 (for one semester) is the proposed plan.

Any suggestion concerning people to contact for donations of money or equipment, or suggestions concerning necessary action can be made to Gordon Crawford, Dr. Doman, or any committee member.

State AWS Meet Held at Tech

The first state Associated Women Students’ convention to be hosted by Montana Tech was held here November 13 and Mr. 14. This is the first time a convention has been held on a campus that did not have a girls dorm.

About fifty women from the Montana University system attended the convention. The colleges represented were MSU, Eastern, Carroll, Western, and of course Tech.

After registration on Friday, a buffet lunch was held at Dr. Koch’s home. First on the agenda were short talks on the “Changimg Role of Women.” Speakers were Mrs. Margaret Fleming from the Butte Social Security Office and Kathy O’Neil, Montana Tech senior. Following the talks there was a discussion of their constitution.

Saturday’s activities commenced with breakfast and speeches by Bruce Williams and Mr. Stoltz. After this a session on Guidance Counseling and Job Opportunities was held by Mr. Maney and then a discussion on “The Free University” was held by Miss Engels.

Highlights of the convention was a luncheon at the Finlen near Berkeley. His works have appeared in the market since the 1940’s. And like those antique headbands, graphics by M. C. Escher have been around for quite a while (The Dutch was born 71 years old). And like those antique artifacts, Escher’s work is the object of a current surge of interest in the underground and on college campuses.

His graphics first began to sell in the Twenties, when his geometric interlocking designs appeared in the marketplace near Harlem (The Netherlands). But this year alone—nearly half a century later—he’s had a major show at the Phoenix Gallery near Berkeley. His works have been featured in 1970 in such diverse publications as Satur- day Review and Rolling Stone, which carried a significant ev- aluation of his work last spring. He’s even made the big time: the pages of the Whole Earth Catalog, the “inside” of in- publications. To cap it off, Hawthorn Books, Inc., has put $6,000 copies of THE GRAPHIC WORK OF M. C. ESCHER ($9.95) in print this year to meet the vigorous demand from students and art buffs. The book, first published in 1961, had sold an average of 10,000 copies annually until 1969 when the dykes burst open.

In more erudite fashion than the students quoted above, Thomas Albright (in an article for ROLLING STONE, Febru- ary 21, 1970) describes Escher’s work this way:

“The main reason for the sudden run on Escher is the close parallel of his vision to the theories of contemporary ‘psychedelic’ art; Escher’s stocks in trade are the concepts of a per- plexing metamorphosis of form into another and of the infinite potential with which every image is charged, the fact that nothing is really as it seems and that everything is governed by higher laws of logic and mathematical laws that draw the universe and all its opposings together in a mysterious, knowing harmony. He visualizes these themes more articulately than any other artist alive, and in a seemingly infinite variety of ways.”

Escher studied at the School of Architecture and Decorative Arts in Harlem in the Twenties. Since then, he has lived in Switzerland, Belgium, and Holland, where he currently makes his home. He divides the bulk of his work since 1961 into nine broad categories, three of which are (1) those based on the regular division of a plane in a never-ending optical continuous sequence of in. (2) those prints in which the background and foreground change places and (3) those in which a geometric plane (a triangle or square, for instance) evolves into a three-dimensional bird or reptile.

Possibly the most significant comprise a fourth class, those ROLLING STONE calls, “story pictures.” For example, “a procession of reptiles emerges from a group of sketches on a drawing board, carry forth a brief existence as they crawl over books and inkwells, short smoke and then return to their paper images.”

If you would like a review copy of THE GRAPHIC WORK OF M. C. ESCHER, please write to Mab Gray, Hawthorn Books, 75 Fifth Ave., New York, N. Y. 10011.

M. C. Escher’s Art Turns Young On

What is the Escher phenomenon all about?

A bearded NYU sophomore put it this way: “It’s like a trip on pot, but cheaper.”

A Northwestern coed, on the other hand, claims that she can’t stand to look at an Escher when she’s high: “The combination blows my mind,” she says. “I’ve got to choose one or the other.”

Like Indian headbands, graphics by M. C. Escher have been around for quite a while (The Dutch was born 71 years old). And like those antique artifacts, Escher’s work is the object of a current surge of interest in the underground and on college campuses.

His graphics first began to sell in the Twenties, when his geometric interlocking designs appeared in the marketplace near Harlem (The Netherlands). But this year alone—nearly half a century later—he’s had a major show at the Phoenix Gallery near Berkeley. His works have been featured in 1970 in such diverse publications as Saturday Review and Rolling Stone, which carried a significant evaluation of his work last spring. He’s even made the big time: the pages of the Whole Earth Catalog, the “inside” of publications. To cap it off, Hawthorn Books, Inc., has put 6,000 copies of THE GRAPHIC WORK OF M. C. ESCHER ($9.95) in print this year to meet the vigorous demand from students and art buffs. The book, first published in 1961, had sold an average of 10,000 copies annually until 1969 when the dykes burst open.

In more erudite fashion than the students quoted above, Thomas Albright (in an article for ROLLING STONE, February 21, 1970) describes Escher’s work this way:

“The main reason for the sudden run on Escher is the close parallel of his vision to the theories of contemporary ‘psychedelic’ art; Escher’s stocks in trade are the concepts of a perplexing metamorphosis of form into another and of the infinite potential with which every image is charged, the fact that nothing is really as it seems and that everything is governed by higher laws of logic and mathematical laws that draw the universe and all its opposings together in a mysterious, knowing harmony. He visualizes these themes more articulately than any other artist alive, and in a seemingly infinite variety of ways.”

Escher studied at the School of Architecture and Decorative Arts in Harlem in the Twenties. Since then, he has lived in Switzerland, Belgium, and Holland, where he currently makes his home. Heater Receives Coal Scholarship

The annual $750 Consolidated Coal Company scholarship has been awarded to Don Heath, Montana Tech junior, according to Paul Stanek, personnel rep- resentative for the company.

The scholarship is awarded each year to an outstanding mining engineering student at the college. Heater earned a 3.5 grade point average during his freshman and sophomore years and has better than a B average after completing two years of work in mining engineering.

Married Students Get Free Break

Student Council has passed a motion to allow married stu- dents and their families into student activities on the student activity card, with and additional fee of $5.00 per year.

The motion almost failed to pass because Bob Westermark brought out the fact that it was unconstitutional for the Student Council to vote a fee increase. It was then decided that work not be a fee increase but only a pass for those married students wishing it.

It was proved that students may purchase these tickets for the rest of the school year at $2.50, as soon as the moratorium for the system can be set up. The money received from these sales will then go into the general fund.

Parents, Faculty Attend Coffee Hour

A coffee hour for parents of Montana Tech students and the faculty was held Sunday November 15.

The gathering, arranged by the Montana Tech Faculty Wo- men’s Club, took place in the Student Union Building. It was a huge success.

A brief program was held featuring three speakers. They were Donald McGlashan, vice-president of the college and director of research and development, Gustav Stoltz Jr., dean of student affairs, and Victor Burt, business manager.

Chairmen for the annual coffee hour were: Mrs. F. G. Bossard and Mrs. F. M. Young. Members of the planning committee were: Joseph Murray, Mrs. John McGuire, Mr. W. M. Griffiths, Mrs. George Sarsfield, Mrs. L. G. Twindel, Mrs. W. Clifford Love, Mrs. G. P. DeVault, Mrs. Marshall Jackson, Mrs. D. W. McGlashan, Mrs. Vernon Griffiths, Mr. and Mrs. Gustav Stoltz, Mr. John DuOu, Mrs. John McGuire, Mrs. M. C. Escher, Mr. Botz, Mrs. Jerry Saffell, and Mrs. Robert Stephens.
Editor Talks....

Evaluation Money Could Buy Books

Each year the Administration sponsors a poll to find out who, among the faculty, is the most popular with the students. The winner for this popularity game is $1,000 for the three most liked.

It should be said here that the popularity game is set up to be a way of giving funds for the library. It would be a most generous action if the top three members of the group of people who take part in the game were to contribute the $3,000 to the Library Fund. They could do this directly or they could give it to the Chamber of Commerce.

The way I understand it, in the grant that supplies the $3,000 for the contest there is an additional $3,000 that has no strings attached. That is to say, it can be used for any worthwhile cause in the school. This, of course, may also be turned over to the library fund.

What about the game? Well you could still play it. And, maybe, without the prize, it would be a true instrument of education.

Question: Are the students allowed to have copies of the minutes of faculty meetings?

If so, they have no one seen them. Could it be that the students are too apathetic to ask for them? If we are not allowed to have copies of why not?

Also, at recent faculty meetings, there have been discussions about a pass-fail system, non-credit courses, and other matters of prime importance to the students of this school. Why hasn't the faculty asked us how we feel about these matters?

It is my opinion that the DOSAF has spread himself too thin and in an effort to keep together his mountain, he has alienated himself from the students. Students are his main concern; yet I feel the students main concern is only not to get caught by the DOSAF. Except when he is making a job or placement, then it is buddy, buddy time.

I think the DOSAF should be worry only about the students and the administration rather than the man for the administration to whom all students must report. It seems as though he has taken it upon himself to provide the taxpayers of the state of Montana with an excellent investment of their tax dollar. He demands an atmosphere conducive to high scholastic attainment, seriousness of purpose, and social responsibility. However, he has not one idea where ideas can be freely discussed and viewed. The students and faculty are certain to see that this authority stops at the classroom door. This is because the classroom is the sanctuary of the learning process, whereas the S U B and the AMPLIFIER, or the Dorm, student government, are not open doors to learning but are used to control the student and the administration.

I am not advocating complete liberalization of the non-existing (look in your catalog page 60) rules but I am asking for the learning process to be extended outside the classroom and let the students learn by doing rather than by instance threats of reprisal.

Respectfully submitted,
Bob Westmark

Football Stalwarts Not Village Idiots ---- Professor States

Dear Sir:

Since the Athletic Department has been charged as being a center of discouragement in the College's physical plant and teaching capabilities, perhaps that Department will be considered as causing a decline in the students mathematical facts indicate. Consider the following FACTS:

(a) The 23 freshmen in football scored ten ACT percentile points higher than did all other entering freshmen.

(b) Thirteen of these 23 had 30 or better, and 13 of these 30 or better ACT percentile points higher than did all other entering freshmen.

The 23 had been awarded academic scholarships before their athletic intentions were known.

Admittedly, an ACT score represents potential rather than a promise. The athletes' ACT scores do not guarantee their academic success. However, the scores indicate that the athletic program can be credited with attracting better quality students to our campus. The above facts indicate that we don't have a team comprised of village idiots.

Congratulations are in order to the Athletic Department for taking the time and effort to cultivate students and molding it into a championship football team.

Yours truly,
Dr. William G. Halford
Head of Department of Petroleum Engineering

Several months ago my employer, a local optometrist, overheard a rather unique conversation between two of his patients.

Mr. Brown, who is a very intelligent and congenial fellow, attempted to begin a stimulating conversation with a hilly who was sitting near him. He looked up from the magazine, he was reading, and asked the hillbilly, "What do you think of marasman?"

The hillbilly eagerly replied, "My wife and I have been saving our money for years so we can go there." Well, needless to say, Mr. Brown was slightly stunned, but since he is of the imaginative sort, he quickly recovered and decided to try his luck again. "What do you think of L.S.D.?," he asked. "He's the worst," "President we ever had!"

Dean Speaks Out On D. W. Editorial

Dear Mr. D. W.:

As Dean of Student Affairs at Montana Tech, I should like to respond to your editorial, "Is Tech Progressing?," in which you publicly deliver a scathing and personal attack upon my character. You also bemoan the inescapable fact that anyone in a position of responsibility should have the necessary attendant authority which you have chosen to terminate.

It is certainly your privilege to espouse whatever opinions you choose, regardless of the manner in which you have chosen to express them. It should be further noted that it is your privilege to espouse whatever opinions you may choose, regardless of the manner in which you choose to express them.

In answer to your editorial, the DOSAF seems to have completely ignored the fact that Tech Progressing?

I am not advocating complete liberalization of the non-existing (look in your catalog page 60) rules but I am asking for the learning process to be extended outside the classroom and let the students learn by doing rather than by instance threats of reprisal.

Respectfully submitted,
Gustav Stolz, Jr., (PE)
Dean of Student Affairs

Miners Bank of Montana

Progress and Power Receive Comment

Dear Dave Wittman,

In answer to your editorial "Is TECH PROGRESSING?" the Dean of Student Affairs last known to be D.O.S.A.F is progressive. The D. O. S. A. F. has many jobs as defined by the current catalog.

1. General supervision of student conduct
2. Supervision of student housing
3. Questions concerning student conduct
4. Campus parking regulations
5. Granting permission of use for any campus organization
6. Vehicle registration
7. Placements of graduates
8. Judge of student scholarship, integrity, citizenship and HEALTH (?)
9. Appointment of Dorm Proctors
10. Finishes part-time jobs for students
11. Scheduling of social, athletic, and social, and other MATTERS involving action by the Associated Students
12. Approves the production, circulation, and distribution of publications of any kind like the AMPLIFIER, although the D.O.S.A.F. is not on the faculty Student Publications Committee

In addition to these jobs the DOSAF serves on the following faculty committees:

- Associated Student Faculty Advisory Committee of which he is Chairman
- Disciplinary Committee of which he is Chairman
- Placement Committee of which he is Chairman
- Copper Lounge Board of Control (SLB) of which he is Chairman
- Facilities Planning and Institutional Research Headman Sophomore Orientation and Counseling member
- Scholarship and Financial Aid Committee a member
- And Dave I'm sure you can't complain about the professional excellence with which the DOSAF has accomplished the following:
- Recruiter
- Placement officer
- Parking regulations officer
- Vehicle registration officer
- Campus Police officer
- Director and Counselor of the student paper and student opinions.

Yes, Dave, I agree with you, the DOSAF seems to have concentrated power. That's a poor choice of words. Doesn't the word POWER, bring to mind an almost evil misuse of unscrupulous authority. But of course, this is not the case with the DOSAF. He asked for the job and it was awarded to him, and with it; the authority for the above jobs, committees, and incidental matters concerning anything from secret marriages to placement of graduates.

It is my opinion that the DOSAF has spread himself too thin and in an effort to keep together his mountain, he has alienated himself from the students. Students are his main concern; yet I feel the students main concern is only not to get caught by the DOSAF. Except when he is making a job or placement, then it is buddy, buddy time.

I think the DOSAF should be worry only about the students and the administration rather than the man for the administration to whom all students must report. It seems as though he has taken it upon himself to provide the taxpayers of the state of Montana with an excellent investment of their tax dollar. He demands an atmosphere conducive to higher scholastic attainment, seriousness of purpose, and social responsibility. However, he has not one idea where ideas can be freely discussed and viewed. The students and faculty are certainly not the authority stops at the classroom door. This is because the classroom is the sanctuary of the learning process, whereas the S U B and the AMPLIFIER, or the Dorm, student government, are open doors to learning but are used to control the student and the administration.

I am not advocating complete liberalization of the non-existing (look in your catalog page 60) rules but I am asking for the learning process to be extended outside the classroom and let the students learn by doing rather than by instance threats of reprisal.

Respectfully submitted,
Bob Westmark

Friend: Someone who stabs you in the back.
Abortion Legislation To Be Considered

A bill proposing that abortion be removed from Criminal Law Codes as a felony will be introduced to the 1971 session of the Montana State Legislature in January.

The present law classifies abortion as a criminal act except when performed to save the life of the mother or in the case of rape.

Three organizations, the Montana Organization for the Repeal of Abortion Laws (MORAL), the Governor's Commission on the Status of Women (GCSW) and the American Association of University Women are supporting the bill. Spokesmen for these organizations said they believe a woman should legally be able to obtain an abortion if she needs one.

Organized opposition to the bill has come from Catholic bishops in Great Falls and Helena. The bishops have said if abortions are legally performed, it will be a "radical departure from the fundamental presumptions on which this nation is founded."

The Commission's proposed bill would make an abortion legal if it is performed in a licensed hospital by a licensed practitioner.

Proposals of the bill include: "The law be changed to 'leav[e] advisability of abortion to the doctor and woman involved, thus taking the state out of the area of legislating a moral issue.'"

"Complete and accurate records must be kept by physicians. "Names of those submitting themselves to abortions will be kept confidential."

"No hospital or person shall be required to participate in an abortion."

MORAL is trying to co-ordinate all politically, socially and economically-oriented individuals concerned with providing safe abortions for all women seeking them. A letter from MORAL to state physicians, senators and lawyers. The number of replies which support or strongly disagree with the bill are about equal.

"It is difficult to get people to come out publicly in favor of the bill, although MORAL has received private support. Planned Parenthood in Missoula has not come out publicly in favor of the bill, but it has given private support. The Office of Economic Opportunity organizes Planned Parenthood so it feels it cannot give public support."

"Since the abortion law has been passed in New York there has been a mammoth backlog of patients awaiting abortions."

This statement was taken from a letter from ARS, an agency primarily developed for the college community, containing departments in family planning, abortion referral, birth control, adoption referral, and social services.

A contact to this agency is all that is needed to set up an appointment in New York on an out patient basis. All arrangements including travel can usually be completed within a few days.

Even though New York state has no residency requirements for an abortion they prefer to limit the abortion facilities to residents of the city. However, they can place an out of state patient in any one of many hospital affiliated clinics in New York city with no difficulty.

Besides the ARS another agency operating in New York is Women's Pavilion, Inc. They also aid and counsel patients seeking abortion care.

One of the major advantages of the procedure used in the abortion care. Both agencies said they used the vacuum-aspiration method up to the second week of pregnancy. This method is the most advanced and is really very simple, safe, and painless.

The actual abortion itself takes only ten minutes to perform. The patient is given a local anesthetic and the only discomfort she may experience is about one minute of cramps. Over one-half of all their patients experience no discomfort whatsoever. Most patients can walk right out after the abortion—though some may feel a little dizzy or drunk due to the anesthetic shot. A few patients feel a little tired after the abortion—especially if they have traveled far to get here or if they haven't been sleeping well for a night or two due to worry. These "sleepy" patients are put in the recovery room to rest for ten to thirty minutes afterwards.

Costs were submitted from both organizations to us in the letters.

The Women's Pavilion, Inc., seemed somewhat higher than ARS. The cost for the vacuum-aspiration method from the Women's Pavilion was three hundred and sixty five dollars. ARS claims the cost to be only between two and three hundred dollars. This method can only be used for pregnancy up to twelve weeks. For the method used in pregnancies between sixteen and twenty weeks, called "Salting Out" the cost is six hundred and fifty dollars and includes a three night stay in the hospital according to Women's Pavilion. The cost of abortion past the twelfth week is determined upon the financial circumstances of the patient, the period of gestation, the nature of operation, and institution in which it is performed according to ARS.

Telephone numbers were submitted by both agencies in case there are any questions or comments. WP—(212) 371-6770 ARS—(215) 878-5800.
Pump Mystery Solved at Last

Ever since September, the freshmen have been wondering just what the purpose of that green pump by the corner of the SUB was. Surely it wasn’t placed there simply to give the engineering students the incentive to get ahead, and it couldn’t be just a monument dedicated to the memory of all engineers, past and present.

And it’s not. It is there for a purpose.

Leading from that pump is a secret pipe that stretches all the way to the rich oil fields in Alaska. The purpose of this pipeline is to bring oil to Montana Tech.

Once at the pump, the oil is pumped into a 50,000 gallon tank buried under one of the buildings on the campus. (Some people suspect that the tank is under the Petroleum Building, a secret stairway leads from the Pet. building to the tank."

It is stored there until every night at ten, when it is pumped to a refinery hidden under the Library. This refinery is so modern that it gives off very little smoke and other wastematter. The chimneys were installed on the Library to cover the noise of the refinery. (It is suspected that one of the locked doors in the passage under the Library leads to this refinery.)

The refined oil is then moved by a series of pipe-lines to an unknown destination. The waste from this refined oil are stored in a large tank under Leonard Field.

The construction around the SUB was undertaken as a cover so that a portion of the pipeline beneath the SUB could be replaced.

This oil is bringing a lot of money to Montana Tech. But where is the money going to? The money is not making the school’s officials rich, as some people suspect. It is being used to buy new oil tankers so that the refined oil can be shipped as TECHOIL around the world.

It is hoped by those who developed this program (known to insiders as “Operation Oil”) that TECHOIL will become the basis for a large fortune that will make Montana Tech the greatest college in the world. (The oil tankers are registered in Denmark under the name TECHOIL Corporation, Ltd.)

An operation as big as this could not possibly hope to continue undetected. Now that it’s been exposed, perhaps we’ll all be given shares of stock, so that we too can grow rich with the school.

Tech Professor Receives Grant

Dennis Haley, Tech professor, has received a $2,000 grant from the National Science Foundation. The grant is for research of a mathematical problem involved with blood circulation.

Dennis Haley, assistant professor of mathematics, will study the effect of a dye injected into the blood circulation system of animals. The injections, which hopefully will be useful in medicine as a diagnostic device, alters the blood circulation system by causing convolution.

Professor Haley will try to detect the effect of this alteration and correct it; thus undoing the alteration the dye concentration measuring machine has caused.

The grant is an extension of the grant Haley started last summer at Illinois Institute of Technology. The current grant will last two years, but Haley hopes to do most of the work this summer.

Dance Committee Needs More Help

The Dance Committee of Montana Tech consists of one person, Dave Sheldon, who is having his share of problems. The fact that he has no help is Dave’s main complaint. He says he gets little cooperation from school organizations who sponsor dances. For instance, these organizations are supposed to remove the tables and chairs from the SUB before a dance and clean the floor and replace the tables and chairs after the dance. Dave says he and the SUB manager usually end up doing this job.

Another problem is the lack of local bands. The cost of hiring a band from Missoula is $300, Jam, a band from Bozeman gets $250.

Although Dave is paid for his long distance phone calls, he says it would be much more convenient if he had his own business phone.

There are eleven more dances planned for the year. Dave tries to keep a balance with the CIC so that the two organizations do not have events on the same night.

Non-college students cannot be admitted to the dances because of lack of room in the SUB. These who have other college ID’s are admitted for $1.00. This charge goes toward paying the two policemen who get $20 each.

Sex and Music TOPS

Dave Sheldon says.

I figured every long-haired freak and hard-hatted fascist on campus would be writing his own narrow-minded opinions for this issue, so why should I be left out? You people don’t seem to realize that the basis for all the trouble around here is that everyone is so horny, we’re all on the verge of mass suicide. It is absolute fact that the only relevant things in this life are sex and music. I can provide you the music, but the rest is up to you. When are you clowns going to wise up? Quit complaining about trivial matters and settle down to some serious frustration release.

The most Patriotic and Self-Surfacizing organization on this wierdo campus is the Dance Committee. Support it and save your sanity!

Sincerely,
Your Dance Committee
David J. Sheldon

BONDED ACRYLIC PANTS

Choose from plaids, checks and herringbones in these good-looking pants. Many color combinations. Sizes 8-18.
There it was, on the first page of every major newspaper in the country. For those who wanted to look extremism in the eye and see fascists in the flesh, the picture of the Cornell University fascist millitants was there in all its shocking horror. The angry scowling faces, the loaded deadly rifles, the bandoleers with bullets across their chest. Not some primitive and lawless foreign country, merely civilized and Cornell University.

The scene was something every liberal and apathetic citizen should burn into his mind. The group, a mere handful of black fascists, had seized the Student Union Building, thrown into the cold sleeping parents of students, ripped out light fixtures, rifled candy machines and wrote on the walls: “Kill the Fraternity Henchmen.”

For 36 hours they broke the law while the lemmings who preclude over the school also precluded over the beginning of its destruction. In grandiloquent spinelessness they watched as a car pulled up and rifles were taken into the building. In magnificent stupidity they did nothing as hoodlums—masquerading as oppressed students—wrecked their gavoce on the building and on the rule of civilization.

And when it was over, when the fascists marched out, their white masochist allies—clapped a path for them and raised their clenched fist. The words they shouted were unclear, but they surely have been “Beat me!”

And the grand finale of this modern day Breek tragedy was played out to its ludicrous and incredible end. The fascists—marched to their Afro-Alnerican “headquarters” and stood with rifles taken into the building. In magnificent spinelessness they watched as the campus—to do the “normal” thing—allowed itself to be shorn.

As the chief hooligan, a sophomore named Whitfield, directed the sheep shearing ceremony, the Cornell officials agreed that they would press no charges against the Fascist hooligans—would they defend themselves in court should any reactionary black guard presume to do so. More, the bleating sheep agreed that judicial proceedings against the five blacks who last year had similarly offended society and were subsequently punished by the college should be nullified.

The sheep had signed and been shorn. They lost more than their wool. They walked out into the open air, naked of any dignity, responsibility or to continue as leaders of a university. Blame the student—fascists? They are not the major culprits. They are but hoodlums parading as aggrieved revolutionaries. But they are not the main culprits! It is men who allowed this incredible assault on democracy and society who must bear the main brunt of the wrath of every sane and sensible thinking citizen of Cornell. The incredible scene of college officials capitulating—no, more than that for here was surrender with degradation—a silence that reveals the bankruptcy of the intellectual college leader.

What we are beholding is the shame of moral fibre the lack of comprehension of real politics, the complete incapacity of the dimwits of the ivory towers.

What they did warranted the representatives of the Cornell Establishment, had to be done “to prevent a growing and imminent threat of what these incompetents fail to understand is that, by their actions, they have guaranteed precisely such a horror. These insulated theoreticians of life fail so miserably to understand that the extremist mind—the mind that is immune to compromise, to reason, to the warmth of interpersonal relationships. These grave diggers of the campus to realize that the extremist knows no limits, that no concession is meaningful to him, that self-hate and self-destruction drives him to destroy all others with him.

The fascists at Cornell—black and white—do not hate the college sheep they sheared. Their reaction is infinitely worse. Not hate by contempt—utter, utter, contempt!

What am I driving at? At the inescapable conclusion that the surrender at Cornell and at every other institution hastens the day that the spectre of fascism from the Reich will become a reality. Every ordinary and unsophisticated citizen who saw the surrender and watched the fascists triumph realize clearly—that America and each of its citizens was menaced by the mob. This is the man who will be driven to the new Hitler.

Should that worst of all days arrive, should that Right fascist triumph, it will be forced to thank its many allies who made it all possible: The black fascists at Cornell, the left fascists of S.D.S. and the weak, vacillating, frightened Establishment that did nothing. These will have been the descendants of Weimar. They would be known as they go under themselves. We dare not let them—do we?
Copper Bowl Game Climaxes Season

Tech's two first quarter touchdowns proved decisive in a defense dominated victory over the Yankton College Grey Hounds in the first annual Cup Bowl.

Tech's first touchdown was set up on a 35 yard Shovers to Plute pass which carried the ball to the four yard line. Heater ran the yardage in two plays for the TD.

Tech's next touchdown came on a pass to flanker Dale Anderson, who went in for the TD. Both of Plute's extra point attempts were good making the score 14-0 at halftime.

Yankton's only touchdown came on a three yard Cummings to Niglio pass. A personal foul moved the ball to the 23 and Obstar bull-exception on the Yankton 38 yard line. A personal foul moved the ball to the 23 and Obstar bull-

The Copper Bowl victory concluded a conference winning season for the Orediggers who won 20 games to score the gam's final score 28-27.

The last game put Tech over the Yankton College Grey Hounds on December 14, 1970. The Orediggers overcame a Yankton College Grey Hounds first touchdown to win a 31-27 victory.

Tech easily won 45-7 against the Northern Montana College on a 5 point lead.

Tech defeated the Colorado School of Mines 26-21 and beat Fort Lewis College the following weekend by a score of 27-7. The Orediggers opened conference play by defeating the Western Montana College Bulldogs.

Tech's last game was against the Idaho Techs on October 17. Tech won 30-14. The winning TD was set up on a 69 yard pass from Heater to Plute.

The team is looking forward to the 1970 Orediggers basketball season which begins on November 13.

Basketball coach Optimistic Man

The 1970 Orediggers basketball team could be "the group of men that will revolutionize basketball at Montana Tech," reports head basketball coach Bob Stephens.

According to coach Stephens, "Tech has never won more than about three games in a season, but we think this time is going to change that."

The 1970 Orediggers basketball team consists of Ted Ackerman, 6'3" freshman. Last year Ackerman was a unanimous All-State selection from C. M. Russell High School, Warren Bickford, 6'11" junior, Dave Burbank, 6'6" freshman, Logan Hapled, 6'4" freshman, Don Klauta, 6'12" sophomore, Larry Little, 5'9" freshman, Nick McEnaney, 6'8" junior, who could be Tech's All-American candidate, Darrel Metz, 6'3" junior, Chuck Myers, 6'2" freshman, Glenn Patrick, 6'5" freshman, Steve Scott, 5'10" freshman, Jim Styler, 6' junior, Gary Weber, 6'7" sophomore, and Mike Wetzel, 5'11" freshman.

Stephens wants to emphasize the necessity of having good crowds at the games to back the team. "We are certainly looking and hoping," he said, "for a lot of support from the student body, the Butte community and surrounding communities, including Deer Lodge, Anaconda and Whitehall."

Basketball Schedule

Nov. 14—Northern Mont. Butte
Nov. 20—Lewiston, Idaho, there
Nov. 21—Lewiston, Idaho there
Nov. 27—Frontier Conf. Dillon
Nov. 28—Frontier Conf. Dillon

"Photography is our Business"
The beauty who adorns this page is Jeri Carruthers. Recently she took an afternoon off to have her pictures taken in places of natural beauty, which in turn enhanced her own natural beauty. The photographs were taken at the World Museum of Mining and the Columbia Gardens.

Jeri is 19 and a sophomore at Tech. She is 5'4", 115 pounds, has reddish-brown hair and brown eyes. She likes skiing, horseback riding, hiking, snowmobiles, long weekends, illegal and immoral parties, merrily walking in the snow and rain at night; she really digs cars.

She loves to eat, likes to drink, play games that have no rules, dancing, and reading newspapers on Main Street at four in the morning. She dislikes plastic people, hates mud, cold feet and bare bottoms; the Viet Nam position one company towns, industries trying to take over, and ducks.

Her favorite pastime is sharing specific feelings with anyone special. Jeri hopes to write books and advertising, intends to get married at a ripe old age, live to be a thousand, and have a good time. She also is a very good poet. Of her family she said, she doesn't see much of her dad, because he's on the road, and says that her mother is cool.

Jeri can be seen any day at Tech running hither and yon between classes, and can be seen in the SUB at various times during the day. This pretty coed is an asset to Tech and makes going to Tech a more pleasant.
