Our Handy Book Store

This prospering school of ours is equipped with many advantages which the students at the school seem to take for granted. One example is the book store. Few students, if any, know of the many services available to them in this small room in the corner of the SUB.

The book store, elevated to "amplifier" status, was raised 4' above the floor for the obvious purpose of selling books. The space formerly occupied by the book store is now used as a convenient storage place for the school's supplies for all organizations. The supplies, which include envelopes and stamps, are now conveniently located just inside the main door to the SUB. The book store is now also the home of the Student Bookstore's Service Station, which includes a variety of envelopes and stamps for sale

Among the advantages the book store offers, the students will be glad to hear that the student's manual is available free of charge. This year, as in previous years, the students manual is available free of charge. This year, as in previous years, the students manual is available free of charge. This year, as in previous years, the students manual is available free of charge.

Reports and manuscripts written by the students can be bound for a price. The service station is also equipped with a variety of pens, pencils, and notepads available for students' use. The_=--=--=- "amplifier" is a convenient place to purchase the necessary supplies for the students' work. The students can purchase the necessary supplies for the students' work. The students can purchase the necessary supplies for the students' work.

Speakers Bureau

Professor Robert Manion, Chairman of the School of Mines, is pleased to announce the establishment of the School of Mines Speaker's Bureau. The Bureau is designed to facilitate the scheduling of speakers who are available to speak to a variety of subjects. Professors contributing to the Bureau are: Dr. Fell, Professors Mannon, McCafferty, and Professor King. The Bureau is currently in the process of organizing the necessary materials and scheduling an initial meeting to discuss the details of the Bureau's operation.

The Bureau will be able to accommodate a variety of needs, including conferences, seminars, and other events. The Bureau is currently in the process of organizing the necessary materials and scheduling an initial meeting to discuss the details of the Bureau's operation.

"Degree Programs MSM"

Montana School of Mines in its 189th year is again offering a variety of degree programs. The school is now offering a Bachelor of Science degree in mining engineering. The program is designed to prepare students for careers in the mining industry. Students will take courses in mathematics, physics, geology, and mining engineering. The program is designed to prepare students for careers in the mining industry. Students will take courses in mathematics, physics, geology, and mining engineering.

Students to Attend Convention

Larry Eaton, Edward Phelps, Ralph Zacca and Ray Hyppa attended the 70th Annual National Mining Association Convention in Spokane, December 4 and 5. They were accompanied by Professors John McCall and the School of Mines.

Every major mining company in Montana was represented at the meeting. In addition to the Verners, the meeting included representatives from the major mining companies in the state. The meeting was well attended and provided an opportunity for students to network and learn about the latest developments in the mining industry.

Department Receives Swiss Computer

The Mineralogy Department recently received a Zeiss 322 computer, which will be used for instructional purposes. The computer is capable of handling a wide range of data and is an asset to the Mineralogy Department.

Evans Receives Scholarship

Jocko Evans, senior in petroleum engineering, was the recipient of the 1964 Petroleum Scholarship. The scholarship is awarded to students who have demonstrated academic excellence in the field of petroleum engineering. Evans, who is a senior in petroleum engineering, has shown a high level of academic excellence in the field of petroleum engineering. Evans, who is a senior in petroleum engineering, has shown a high level of academic excellence in the field of petroleum engineering.

Department Receives New Bulldozer

The Mechanical Engineering Department recently received a Caterpillar 122B bulldozer, which will be used for instructional purposes. The bulldozer is capable of handling a wide range of tasks and is an asset to the Mechanical Engineering Department.
CLASS ATTENDANCE

Compulsory class attendance, systematically enforced, is a matter of great concern to many students who find themselves restricted by its limitations and their personal freedom. The university, provided the instructor is dedicated and conscientious, demands obedience from its students. Granted, the arbitrary denial of freedom. This concept of freedom applies to every sphere of life in a democracy, including college. It is an irony that the college student who is expected to actively display his maturity to his parents, friends, and the strong arm of the law, is openly treated as a child by his instructor. Yet, serious friction occurs when dedication becomes so intense that it demands compulsion. It is a grave consequence when a person living in a democracy which safeguards its citizens' rights is bound by the arbitrary denial of freedom. This concept of freedom applies to every sphere of life in a democracy, including college. Yet, serious friction occurs when dedication becomes so intense that it demands compulsion. It is a grave consequence when a person living in a democracy which safeguards its citizens' rights is bound by the arbitrary denial of freedom.

The Amplifier cannot be timely because it is published once a week. News does not continue to improve. We are striving for good issues and we are not getting from one place to another can be done quickly and well. The most perplexing aspect of the criticism is that it comes from people not active in extra-curricular activities, people who are not involved in the school, and because the Amplifier is not timely, most news, as such, entered into the Amplifier, is not fresh but a recap of events that have occurred before. This community supports the Amplifier and the students of the Montana School of Mines that due to the arbitrary denial of freedom, this school would disappear. Limited we must be careful when we do not reward the students for their shortcomings before he proves them. Finally, if a student's mastery of a course is discovered by his performance, why should the student be punished for not being trustworthy?

To the Editor

Dear Sir:

I would like to note that our class's collection of rocks has no restrictions and is only one of the few campus clubs with no restrictions at all. The collection is one of the few campus clubs with no restrictions at all. It is interesting that members be students at the School of Mines, of which the October 30, 1964 issue of the Amplifier, entitled "Bob Toivonen Invited to Speak," shows that members be students at the School of Mines. The Amplifier is not a club on any issue. One prospect of the Sierran College is that in order to improve the quality of the Amplifier, members be students at the School of Mines. The Amplifier is not a club on any issue. The Amplifier is not a club on any issue.

Sincerely,

Donald C. Huska

Bob Toivonen Invited to Speak

At a recent meeting the general faculty members of the Mineral Club had a discussion on the turnout at the ballot box. Just over 50% of the students voted, which is a very poor showing, and leaves a prominent question. "Why?"

For one thing, "M" day is a holiday and no one is required to be on campus during this traditional school function. Although not to be here is an artistic choice on the part of those who stay home. Still, the results will have to be faced. A tradition is a tradition, and participation by students in their school government is most desirable, especially via the ballot box. Less than a 50% turnout is unusual for a school that is closely knit, intellectually as well as physically. Our campus community is tight and getting from one place to another can be done quickly and well.

To increase the turnout, it appears that two solutions are present. The ballot box should be held for a greater length of time during the "M" day activities to be held at the high school during the "M" day activities to be held at the high school. The popular school freeway. Or, elections could be held in the high school in the high school in the high school in the high school. What is needed is to make the idea of voting more appealing and choosing the date for the election. Some satisfactory solutions is called for.

At last I found a perfect Girl--Who could ask for more. She is attractive, attentive, and a concept of freedom.ap-...
Newman Club
Father Michael J. Lien, director of the Papal Volunteers in Latin America, spoke at the November 17 meeting of the MSM Newman Club. In his speech, Father Lien pointed out that the population in Latin America is growing at a rate that will spread social upheaval as well as economic difficulties, a trend that will be worsening. To emphasize his point, Father Lien distributed an untitled slide.

Today there are 180 Papal Volunteers serving 12 Latin American countries, but Father Lien stressed that many more are needed. Volunteers are needed for the next five months. The usual period of service is six months but some groups serve a month. MSM students interested in serving are requested to contact Father Burns, Newman Club's chaplain.

The Northwestern Mountain Province of the Papal Volunteers had a meeting in Pocatello, Idaho during the Thanksgiving Holiday. MSM student leaders Marcia Burke, Margie Gardner, John Hasley, and Frank McCarthy attended.

ALUMNI MEET
The Montana School of Mines alumni had a luncheon meeting Tuesday, November 17, at Lydia's supper club. President Frank Antonelli (Class of '50) presided over the meeting. Father Burns, chaplain of the Alumni Association, welcomed the alumni.

The speaker for the evening was John F. Dougherty, Class of '40, who delivered a speech entitled "Open Pit Program Planning." President Frank Antonelli accentuated it with film slides of the mines and mining operations.

Fifty-nine alumni and guests were present.

INTERVIEWS
This month five companies will be interviewing seniors at places of employment upon graduation. Graduate students will also be interviewed. The companies are the Schlumberger Well Surveying Corporation, Kaiser Aluminum and Chemical Corporation, the Reserve Mining Company, and the American Alloys and Metal Workings Corporation.

For these interviews seniors must fill out forms for the benefit of the interviewing company. After forms are completed they are sent to the Dean. The schedule for the interviews is as follows:

December 4—Schlumberger Well Surveying Corporation. Senior and graduate petroleum and geological engineers.

December 14—Reserve Mining Company. Senior and graduate mining and mineral dressing engineers.

January 18—American Alloys Company—Senior and graduate metallurgists and metal dressers.

January 19—Kaiser Aluminum Company—Senior and graduate metallurgists and metal dressers.

January 19 and 21—Ingersoll-Rand Company—Senior and graduate mining and mineral dressing engineers.

THE GLOE CLUB

Newsmen's Club

The Glue Club

MSM has recently presented The Glue Club for many years for the pleasure and entertainment of student bodies, service clubs, church groups and other gatherings. The Glue Club has been particularly well received by people in state institutions at Warm Springs, Galesburg and other places, where live entertainment of this kind brings happiness in a way few things can. This year the performers did a rendition of the usual tricks and a few sororins and the sororins are working on a repertoire of music in the hope that they may be able to add the sum total of each happiness and in the process get rich enjoyment for themselves.

Ralph Malahowsky, S. Higinbotham, Norman DeNeal, Joe Semy, Joe Frany, Ed Hilop, Mike Gartz, Bob Dana and Joe Kehark are members of this club. In the fall, the group had the only one of the group who has been in the club for years. Adjusting to other and acquainting themselves with the unfamiliar is a slow and time consuming. Also, the lack of an accompanist is now causing some difficulty. It is sincerely hoped that some student will come forward soon to replace the two pianists who have graduated.

RALPH SMITH, director, who has many years of singing and directing experience, both at MSM and in his church choir, is confident that more practice sessions are held and more familiarity with the music and among members develops, all the more pleasure and enjoyment music will come to the individual. This interest will be welcomed into the group and are those who they wish to be with the same satisfaction as the other boys. The club is beginning to enjoy.

Women’s News

By Kathy Verona

On Sunday, November 22, a Mothers’ Tea, sponsored by the Glee Club, was held at the Copper Lounge. Approximately 225 faculty and guests attended the tea. The drawling room was another area that was being held. A drawing took place, which included a milked film of a drilling entitled “Development of Under-ground Mining.”

Fifty-nine alumni and guests were present.

LOCKER ROOM

Gossip

It looks like Earl Kusikowski was talking when he said he has been spent.

What’s all about Betty Richardson and her hitting the hole into the boys’ locker room? I think Al Amundson is badly in need of the psychiatric help all he does anyway. He is always looking for things to do. “Take Me Out To The Ball Game” seems to be his favorite. He even went out in the streets and even in the places he really should have been. The only trouble is that he can’t be considered a very good baseball star, too. How is it that Joe Frany can’t even walk into the ball, without falling all over the chair.

Carol Zeldes wants to get married on Ground Hog’s Day. Any volunteers?

We have some badminton stars in our midst. Linda Murray and Joan Birton.

Fraternity News

Theta Tau

A Theta Tau Pledge meeting was held recently. Election of pledge officers took place. Pledge class officers are president, Clint Dagenhart; vice-president, Steve Denton; secretary-treasurer, Bob Lohrfeld; Assignment of pledge duties was also made.

Sigma Rho

A regular business meeting of Sigma Rho Fraternity took place on November 12. President Kuehler Street, Associate Professor and head of the Department of Engineering Science and members of the alumni who reside in Butte, helped the fraternity to become incorporated.

Frank is a two-year engineering student at the Montana School of Mines. He is a junior engineer, majoring in petroleum engineering. He has been a credit to Notre Dame.

Leahy Pays Tribute To “Big Ed”

by John Giacomino

Frank Leahy, former Notre Dame football coach and athletic director, was the principal speaker at a November 4th banquet held at the Finlen Hotel. The banquet honored Butte and Boys’ Central High School football champions and the Butte High School cross-country state champions.

Leahy stated that he had one regret. He would have liked a renewal of his old-time friendship with “Big Ed.” Ed Simonich was away at Finlen “Big Ed” established a reputation as a unique student and attended Butte High “Big Ed” was the principal speaker at a Notre Dame basketball tournament. The All-Conference members this season are: John Evans, senior, tackle; Bill Madison, senior, tackle; Chuck Starin and Terry Hibbert, sophomores; guard; Ed Simonich, senior, center; Pat Leary, sophomore, halfback; and Ken Tholstrom, freshman.

Hey, Carl Koskimaki, whose fist we noticed at all times during the school year, and now a tournament has been organized and is in full swing. Thirty-two singles contestants have entered, and in the first few weeks of play only a small number have been eliminated. For this reason the tournament. Coach Simonich urges all participants to be on time for their respective games. If this is done the present schedule can be met.

Ideas and Progress

When man tapped the energy that lights the sun and stars, he also brought forth unprecedented ideas and conducted daring research.

Many of today’s students will become the research scientists of tomorrow. Their task will be to venture into areas of knowledge that are unknown today. In their course of exploration, they will undoubtedly find new applications for copper.

Today, as research and technology in many fields rocket man forward toward the conquest of his environment, products made of copper and brass are more essential to mankind. Anaconda’s research and development programs are geared to create useful new products and new applications for the red metal.

Copper — and Anaconda — are moving forward.
